800-956-4437

Fax:

440-729-2586

Corporate Email Address:

sales@dataloggerinc.com [1]

About Us:

Our data loggers are used in a wide variety of applications in remote monitoring, in industrial process and manufacturing industries, for automotive and aerospace data collection, in pharmaceutical manufacturing and storage, and in geological and environmental monitoring. We have even flown units on the Space Shuttle and ISS (International Space Station)!

If you're not sure which logger might be best for your application, speak with one of our applications engineers at 1-800-956-4437 and we can help you select the best logger for your project.

We also offer data acquisition and control systems including high performance real-time systems for situations where traditional test systems or programmable controllers are not suitable. These systems are used in data acquisition, test and control applications where microsecond precision is needed. We have models with 8 to over 400 analog input channels, analog output channels, digital inputs and outputs, counters, RS-232, RS-485 CANbus and Profibus interfaces.

We provide configuration assistance, custom programming, custom system design and assembly, post-sales technical support, and repair and calibration services. Our development capabilities include custom data acquisition and data logging systems, test and measurement systems, and portable data collection systems.

Computer Aided Solutions maintains a network of sales representatives and distributors that covers all of North America and key markets in Central and South America.
