

EDUCATIONAL SERIES

Security Webcasts

• The ChemITC Chemical Sector Cyber Security Program has produced three new webcasts to help IT and manufacturing system security professionals at chemical companies as they implement cyber security practices. Collectively called the Implementation Webcast Series, these webcasts are narrated by cyber security program members and are designed to complement the program's guidance documents and white papers. The series covers a variety of topics and supports the cyber security requirements in the Responsible Care Security Code.

Readers can download the webcasts by visiting www.chemicalcybersecurity.com.
