## **About Us:**

Process filtration systems and technology are critical for industrial productivity, employee health and safety and protection of the environment.

Particulate filtration equipment such as fabric filter baghouses, cyclones, mist eliminators, ESPs (Electrostatic Precipitators) and cartridge dust collectors require technology and system integration investment at initial design and on an ongoing basis, before maintenance problems, equipment damage or fines occur.

FilterSense offers a comprehensive range of reliable, easy-to-use instrumentation, controls, software and services to prevent problems before they occur. At the same time FilterSense solutions provide a 1-2 year return on investment through additional benefits such as reduced maintenance costs, improved process performance, equipment protection, energy savings and automated EPA reporting.

The products and services offered by FilterSense enable industrial plants throughout the world to Analyze filtration system performance, Optimize process control and Comply with regulations.

To ensure Quality and Customer Satisfaction to our world-wide customer base, FilterSense is ISO 9001:2000 certified.
