

Bag Unloading System

Modular system safely unloads bulk bags of non-free flowing powders and automatically fills drums to a programmed set point. The system includes a bulk bag discharger with flow enhancement, dust control and discharge gate technology, an inclined screw conveyor with variable frequency drive, a rotating sieve with magnet to ensure product purity, a dust-tight gain-in-weight drum filler, and auto/manual system controls. The modular design allows equipment to be customized to fit individual application requirements.
