

Co-extrusion System

This sheet co-extrusion system includes two custom-designed extruders. One is a 2-in. extruder with a 30:1 L/D, while the second is a 1.5-in., 24:1. Both use proprietary screws, barrels and components. The Flex-lip Sheet Die has an adjustable die range from 0 in. to .125 in. The lip adjustment is manual and the die is equipped with a restrictor bar. The co-extrusion block was designed with an "A-B" configuration. The company claims to provide extrusion systems for any application, from lab to full-scale production.
