

## Fluorplastic Tubing

A full line of fluoroplastic tubing products extruded from a variety of materials is available in several styles and supplied with different end configurations and fittings. Precision Fluorplastic Tubing is extruded from Texfluor PTFE, FEP, PFA, ETFE and ECTFE in sizes ranging from 1/8 in. to 4 in. I.D. as capillary, convoluted and corrugated styles. Suitable for a wide range of fluid handling applications, special features such as wire-wrap reinforcement to handle increased pressures, cuffs, no cuffs, flares and fittings are available. Capable of operating continuously up to 500°F, depending upon the material and configuration, the tubing can be extruded with various profiles and cut to precise lengths.
