

## Gas Monitoring System

The PrevEx Flammability Analyzer features rugged, durable construction that withstands corrosion when exposed to high moisture and caustic agents in sewage lines and treatment facilities. Sensing flame technology continuously burns the entire sample so the system is immune to poisons and corrosives. Universal calibration allows it to read multiple gases and vapors accurately. Efficient operation and an all-inclusive design equates to less maintenance. Should a problem of any kind arise, the temperature of the flame reflects and changes and alerts users immediately.
