

Particulate Sensor for Dryers

This particulate sensor is designed for chemical spray dryers and pharmaceutical powder fluid bed dryers. Moisture present in a drying process will not affect operation nor will the buildup of wet powders. The company's proprietary combination of Induction Technology and a Protected-Probe also provides low level measurement capabilities (0.01 mg/m^3) that is important in the pharmaceutical industry to prevent the loss of valuable powders from filtration systems. Outputs include 4-20mA, Modbus and Ethernet.
