Pneumatic Valve Islands

Norgren has extended it VM valve island family to include the VM15. With a flow to size rate of 1.0 Cv, the 15mm-wide VM15 allows customers to specify a cost-effective compact valve island solution. Previously, to achieve the flow rates the VM15 can deliver, they would have had to opt for a more expensive larger footprint valve solution. The VM series valve manifold range provides a high performance solution that is easy for customers to use and configure to individual needs.
