

Sanitary Jacketed Divert Ball Valves

Product temperatures – whether hot or cold - can be maintained with Sanitary Jacketed Divert Ball Valves. Product solidification and blockages can be prevented with efficient valve jacketing for use with hot water, steam or other appropriate heating or cooling medium. Jacketed flush-bottom, two-way and multi-port divert valves are manufactured in sizes from 1½ to 4. These durable full-flow port valves are designed for corrosion-resistant, highly sanitary applications.
