

Volumetric Titrator

The Aquacounter Volumetric Karl Fischer Titrator (AQV-300) has state-of-the-art performance features that allow measure of moisture content from low to high concentrations quickly and accurately. Measurements are simple and routine with precision. The AQV-300 has six built-in calculation modes to accommodate solid, liquid and gas samples. It includes a statistics package with one-touch calculations. Four files with preset conditions can be stored in memory and allow instant recall of data for up to 20 samples. A built-in detector monitors titration status and a direct key access allows entry of titration parameters. This compact unit with a small footprint has balance and computer interfaces for GLP and ISO documentation.
