

Automatic Portable/Disposable Viscometer

The PDVa-100 Automatic Portable/Disposable Viscometer is a portable, efficient, alternative to larger full-featured laboratory viscometers. Disposable tubes greatly reduce testing time because instrument cleaning is not required. It is a simple-to-use, accurate, compact and lightweight field viscometer that can be taken anywhere to measure the viscosity of Newtonian and non-Newtonian fluids. Small sample size and temperature control can be accommodated. The viscosity range is 0.7 to 10^6 cP, and the absolute accuracy is better than 1% without any instrument calibration.
