

Metric Fork Heads

Used mainly with pneumatic or hydraulic cylinders, these metric fork heads (yokes) come in two types. One is available with a clevis pin and circlip, and the other a clevis pin with snap-on securing collar. The fork body is manufactured from steel, with a zinc-plated, blue passivated finish. The circlip and pin version is made according to DIN 71782 specifications, with DIN 471 circlip and pin made of zinc plated steel. The snap-on securing collar with clevis pin version is zinc-plated steel. Stainless steel versions are available upon request.
