

Pressure Transmitters

Company offers three new models of pressure transmitters with Foundation Fieldbus capability. The FFX2242 is a thread-mounted pressure and temperature transmitter for processing applications, designed for use in both hazardous and non-hazardous locations. The FFX2281 is a rugged industrial pressure transmitter for use in both hazardous and non-hazardous locations. The FFX2291 is a button seal pressure transmitter for use in both hazardous and non-hazardous locations. All are designed for both ATEX and explosion-proof/flameproof operation.
