

Web-Enabled Gateway

The FactoryCast gateway simplifies connecting Legacy Modbus serial devices to Ethernet networks. The configurable and customizable Telemecanique Web-enabled gateway does not require any infrastructure modifications to connect Legacy Modbus serial-link and remote access (modem) installations with Ethernet TCP/IP networks. The gateway also enables e-mail messages and alarm notifications from stand-alone applications. The new ETG1000 supports all Telemecanique and Modicon branded PLCs and devices and eliminates the need for serial communication interfaces on third-party devices, as well as expensive PC gateways.
