

Particle Size Analyzer

Booth 1040 - The Insitec Pharma Voyager on-line/automated at-line particle size analyzer is an option in pharmaceutical manufacturing, especially for pilot plant operation and PAT research, where mobility, cleanability and ease of operation are important. It is used for sites needing to monitor multiple unit operations such as mills, spray driers, atomizers and classifiers. Built for the plant environment, it can be moved easily to production at any point.
