

Pumps and Tubing

Booth 1405 - The 520/620 family of peristaltic pumps are designed for the accurate metering, dosing and transferring of corrosive or sensitive fluids in sanitary environments. They are utilized for filtration, fermentation and dispensing applications, meeting full quality testing standards. A platinum-cured silicon tubing with a unique LaserTraceability feature, PumpSil is designed with an ultra-smooth bore to control protein binding and bacterial growth. The Pumpsil-D is designed specifically for high-accuracy dispensing applications in the biopharmaceutical industry. Bioprene is a Thermoplastic Elastomer (TPE) tubing and an alternative to latex or silicone tubing.
