

Bulk Bag Unloaders

PortoVeyor Bulk Bag Unloaders provide pneumatic transfer of material from bulk bags into silos that are normally serviced by pneumatic trailers or railcars. When normal trailer and rail service is available, the skid-mounted PortoVeyor can easily be moved out of the way until needed again. They allow safe handling and clean unloading of any free-flowing dry bulk material shipped in bulk bags – ranging from cement to food. The moveable unloaders make delivering bagged product to storage silos or processing equipment almost as easy as bulk delivery.
