

## Dust Collection Equipment

Line of dust collectors meets a range of dust collection applications from simple nuisance dust projects to the most demanding technical challenges associated with corrosive environments, sanitary conditions, combustible dusts and gases, hygroscopic materials, low bulk density materials, and materials that are under high temperature, high pressure or high vacuum. Dust collector types include bin vent filters, welded modules, high pressure and high vacuum units, cartridge and pleated filters, and cyclones ranging in size from 30 cfm to 100,000 cfm.
