

## Industrial Air Compressors

The Sullair 3000, 3700 and 4500 air compressors are 40-, 50- and 60-HP models designed for point-of-use facility installations. The units are now more compact, cost- and energy-efficient, serviceable, powerful and quieter. Service and routine maintenance is faster, simpler and more efficient, minimizing production downtime and creating a cleaner, safer work environment. All standard compressor maintenance can be performed from one side of the machine and the compressor's fluid level can be checked without opening the doors.
