

Plastic Shaft Collars

Plastic clamp-type shaft collars are offered in several thermoplastics, with stainless steel hardware, for use with FDA/USDA-approved equipment. They are machined from Teflon[®], nylon and other thermoplastics to provide an exact material match to other system components. Developed for food processing equipment, they are offered in one- and two-piece styles and are supplied with stainless steel clamping screws. They are available in ¼-in. to 4-in. I.D. sizes.
