

Pneumatic Valve Islands (428)

Company has extended its VM valve island family to include the 15mm-wide VM15 that has a flow to size rate of 1.0 Cv. Its manifold range provides an engineered solution that is easy to use and configure to individual needs. Installation times are reduced because of integrated push in fittings. Should machine specifications change, the configuration can be changed rapidly via interchangeable valve types. Extra valves are easy to add for more functionality.
