

Optical Disc Vacuum Cups

This line of ring vacuum cups and suction cups (unloader discs) handle virtually all optical storage media including CDs, DVDs and BDs. Included is a full range of single cup, bellows, half ring and closed or full ring cups, molded from silicone. Designed to provide maximum suction while protecting the delicate coated surfaces of optical storage media, they are compatible with most robotic handling systems and packaging machines. They are offered in a wide variety of styles for use with EAM (USA), Heino Illsman (Germany), Gima (Italy) and Kyoto (Japan) automatic packaging machines.
