

Vacuum Conveyors

The IC Series of vacuum conveyors feature patented COAX multistage ejector technology. Designed for safely conveying virtually all types of materials, the series is ideal for transporting flakes, pellets, and powders in a variety of applications, such as painting, textile coloring, water purification, rubber mixing, and tile molding. The conveyors are completely enclosed, protecting users from inhaling potentially harmful ingredients and preventing materials from damage due to external elements. Constructed of high-grade steel, the series is designed to cope with the most demanding circumstances and its unique filter design traps particles to prevent dust and contamination.
