

Straight Frame Conveyors

Straight Frame “Move-It” conveyors are suited for horizontal or incline conveying to grinders, totes, or to the next work station. They also serve for under-pressure applications, box transfer, and scrap removal. An optional built-in chute collects parts or scrap for transport. Standard belts can be used for 10 degree inclines. High-friction or grip-top belts work for slopes up to 30 degrees. For higher angles, cleated belts keep materials moving.
