

Vibratory Feeder

The Model 26C Vibratory Feeder is a rugged AC-operated unit, enables linear, exact feeding of large quantities of bulk materials. It is designed for feeding up to four tons per hour and features a totally enclosed, dust and moisture resistant patented magnetic drive, which extends coil life and makes cleaning easier. Simple AC controls operate the feeder with precision. A Hi-Vi Magnetic Drive Circuit, powered by alternately opposing and attracting magnetic forces, assures low maintenance. There are no sliding or rotating parts, power consumption is low and installation is easy.
