

Blend Analyzer

Company offers an addition to its Antaris near-infrared (NIR) analyzers. The Antaris Target Blend Analyzer is a fit-for-purpose blend measurement solution that is dedicated to the real-time analysis of pharmaceutical blending processes. It offers a new spectroscopic analysis technology designed specifically for the control of blend uniformity in real time. Utilizing MEMS technology, it achieves best-of-class performance, repeatability and reliability for formulation development, process development and production scale use in solid dosage form manufacturing.
