

## Flow Switch

With its no moving part, thermal mass flow sensor and wetted materials available in either CPVC/Hastelloy C-22 or 316SS/Hastelloy C-22 combinations, the compact M180 Flow Switch is ideal for equipment flowing, dispensing or measuring corrosive fluids such as chlorine. It provides precision gas or liquid flow monitoring, control and alarm switching, and can be applied as a level or interface detection and alarm for harsh fluids. It is ideal for use in equipment applied in a wide range of industries, including chemical, food/beverage, hydrocarbon production, pharmaceutical, water and wastewater treatment.
