## **Granulator (1288)**

The VULCANATOR Model KM30 quickly reduces whole bales of natural and synthetic rubber to small bits with a unique low friction cutting design. The 150 HP model is capable of processing larger and heavier bales up to six times faster than previous units. It features a larger throat and more powerful cutting. The split clam shell design allows for easy maintenance of cutters and screens. The unit's housing is constructed of heavy steel with a high level of precision incorporated into every component. An auxiliary fly wheel helps this unit rip through even the toughest bales.
