

Flowmeter Handles Tough Applications

At ISA: Attendees had the opportunity to see the Marsh Multi-Mag flowmeter, which was engineered to provide high accuracy in the most difficult flow conditions. It measures liquid volumetric flow rates in pipes sized from 4 to 120 in. (101.6 mm to 3 m) with a streamlined multi-point technology that creates only negligible pressure loss. It's also available for 1-, 2-, and 3-in. taps.

McCrometer, Hemet, CA; 800-220-2279

Editor's Note: Difficult conditions include low flows, wide flow ranges, flows containing sand and grit, vertical pipes, and locations near bends and elbows.
