

## **HVAC Steam Software**

HVAC Solution Steam Program Version 4.1 offers an easy drag-and-drop method of designing and modeling HVAC steam systems. The stand-alone, Window-based program allows for easy modeling of steam generation, steam distribution, steam utilization, and condensate-handling systems. It automatically performs head loss and static pressure calculations, pipe and duct sizing, data recalculation, component insertion, full psychrometric calculations, and equipment-type changes on-the-fly. It supports compiling of equipment schedules based on the companys catalog. Version 4.1 offers all the latest upgrades including an all-new selection of fan coils.
