Standard Database for Reference Data

Standard Database (SDB) for SmartPlant Reference Data delivers commodity codes that describe bulk materials throughout a project's lifecycle, providing a centralized capability to manage catalogs and specifications for multiple design systems and materials management. It enables rapid implementation of enterprise reference data management, and/or materials management, and incorporates a comprehensive catalog of industry standard material parts, organized and described for "out of the box" use by owner operators and engineering, procurement, fabrication, and construction companies. The content is pre-configured to enable catalog and piping specification interfaces to intelligent 3D applications.
