Cosa: Spectroscopy Update

Cosa Instrument Corp., Norwood, NJ, has entered into an exclusive deal with Scinco Co. LTD of Seoul, Korea, for the sole distribution, technical support, and service of its PDA UV-Vis spectrophotometers in the U.S. Because they use reversed optical technology, the Cosa Scinco PDA S-3100 and S-4100 do not have a problem with stray light. They also have a new way of doing analysis based on software that allows users to enter support equations for the evaluation of data. In addition, they comply with 21 CFR Part 11 protocols.
