

12- & 17-Position M12 Connectors

To meet the needs of increasingly smaller machines and devices, Phoenix Contact introduced the field-wired M12 connectors in 12 and 17 positions. The high-density M12 connectors can be used in applications where previously only M23 and larger connectors could be used. The sensor/actuator connectors:

- Use Piercecon® connection technology for easy field installation.
- Are designed for I/O connections in applications such as image processing systems, decoders, encoders, pressure sensors, measurement devices and master cables for sensor boxes.
- Feature color-coded terminals and are available in both male and female versions.
- Meet IP65/67 requirements and fit wire range #28-26 AWG.
