

Japan Fukushima probe says reactors unready for natural disaster

Reuters

TOKYO (Reuters) - A government-appointed inquiry into Japan's Fukushima nuclear crisis raised doubts on Monday about whether other atomic plants were prepared for massive disasters despite new safety rules, and delivered a damning assessment of the regulators and the station's operator.

The report, the second this month about the disaster, could be seized upon by Japan's increasingly vociferous anti-nuclear movement after the restart of two reactors, and as the government readies a new energy policy due out next month.
