

## Enablon Recognized as a Leader in Carbon and Sustainability Management Software by Groom Energy Solutions

The Associated Press

Enablon, the world's leading provider of sustainability management software, today announced that it has been named a leader in the latest Enterprise Carbon Accounting (ECA) research issued by Groom Energy Solutions, a leading provider of commercial and industrial energy solutions.

"Enablon has a strong track-record and a large and diverse customer base," states Paul Baier, report author and vice president of sustainability consulting at Groom Energy. "Companies wishing to go beyond carbon accounting to improve their overall sustainability performance should consider the Enablon solutions."

According to the report titled "The 2013 Buyers' Guide for Enterprise Carbon Accounting and Sustainability Software," customers expect basic Scope 1 and 2 carbon tracking, water and waste modules, and a reporting dashboard, in an easy-to-use, proven system. More advanced companies also expect support for supply chain surveys, energy management, EHS modules and integration with ERP systems.

The report also confirms the increased adoption of ECA software by companies, urged by the requests from top customers for annual environmental data, a desire to enhance company image and increase brand loyalty and motivations for cost savings from improved energy management.

"Enablon's mission is to help organizations unlock the value of sustainability. Better energy and carbon management is often the first step for companies that want to improve their performance, we're therefore very pleased to be recognized once again as a leader in the space," commented Phil Tesler, CEO of Enablon North America.

Groom Energy Solutions analyzed 75 providers and recognized Enablon as a top 2013 ECA market leader based on the following criteria:

Number of customer deployments  
Technology features  
Sales momentum  
Market vision  
Financial stability

Enablon offers one of the broadest and deepest platforms for Sustainability and Carbon Management. Enablon provides companies worldwide with solutions to manage their environmental performance, maintain regulatory compliance, reduce costs and streamline business processes. The Enablon Sustainability Management Platform is an industry-leading platform, enabling automated and real-time data collection and consolidation, reporting automation, and enterprise-wide information-
