

Premekon to Streamline Operations With Epicor ERP

The Associated Press

Epicor Software Corporation, a global leader in business software solutions for manufacturing, distribution, retail and services organizations, today announced that Finnish metal company Premekon is going to implement the next-generation Epicor enterprise resource planning (ERP) solution.

During the selection process Premekon researched various ERP vendors but found that Epicor was best suited to their specific business requirements. The ease-of-use and flexible nature of Epicor ERP appealed especially to them.

"We have recently invested heavily in automating our production facilities and equipment and now was the right time to update our ERP system and keep up with modern demands," said Ville Immonen, business director for Premekon. "We believe strongly that with a modern ERP system in place we can streamline our operations and become more efficient in order to continue growing our business and deliver good quality solutions to our customers."

"This is further proof of how Finnish manufacturing and metal companies can benefit from implementing a modern and flexible ERP solution that can inspire them to deliver superior products and services," said Matti Pulla, regional director for Epicor in Finland and the Baltics. "We are certain that Premekon will realize a range of benefits from implementing Epicor ERP, including not only the streamlining of their production processes but also helping them better plan for international growth."

Privately owned Premekon is a Finnish company that designs and manufactures walkways, stair towers and steel structures. The company specializes in turnkey production of walkways that are purpose-built from 3D design right up to installation. Its clientele includes many leading industrial enterprises and equipment manufacturers worldwide and Premekon has supplied its products to companies in Europe, Asia, North and South America.
