

Temperature Sensors for Process Automation

TS400 and TS500 temperature sensors incorporate features that make them suitable for nearly all factory and process automation applications. They are platinum RTDs, or resistance temperature detectors, a technology commonly referred to as Pt-100. This technology is known for its precision, repeatability, and ability to provide fast response times.

Turck, Minneapolis, MN; 800-544-7769
