

Mag Meters for Low Flows

MAC Series electromagnetic flowmeters measure very low flows of electrically conductive chemicals and fluids of varying viscosities. The small plastic-bodied meters are capable of measuring pulsating flows from air and solenoid-driven metering pumps. They transmit a continuous flow signal, measure and display both flow rate and total flow, and provide a variety of outputs including relay alarm outputs. These "minimag" meters are offered in three sizes that accommodate nominal maximum flow rates from 1 to 8 gallons per minute.
