

Metal Mag Meter

The Signet 2552 mag meter is a rugged insertion flow sensor that permits hot-tap access to the pipe stream. The design allows quick and easy installation or maintenance without system shutdown. It can be mounted into a broad range of pipe sizes from 2 to 48 in. (DN50 to DN1200). Three output choices are incorporated into the durable metal housing, and there are no moving parts to wear or foul. The unit measures flow in fluids containing a high content of particles, solids, and fibers, making it appropriate for applications with dirty fluids.
