

## Submersible Drum Mill

The PSDM-55 submersible drum mill has been developed as an economical version of the popular PSM submersible basket media mill. This stand-mounted basket-type mill has an independently powered milling shaft/basket assembly and a separate single mixing shaft. It's engineered for low viscosity batches up to 20,000 cps. There are no floor anchors. It's movable with a forklift or pallet jack.

Editor's Note:

The free-standing mill is capable of processing batches from 20 to 55 gallons in a single drum.
