

Highly Accurate Microweighing in Spotlight

For critical microweighing applications, the new ME36S promises a powerful combination of precision technology and ease of use. With a readability of 1µg and full resolution throughout the entire weighing range up to 31g capacity, it's appropriate even in applications where ultra-small samples must be weighed into heavy or bulky tare containers. The display is separated from the weighing unit for improved weighing accuracy without interference from elevated temperatures or drafts. Adaptable to any work situation, the ME36S is equipped with a flexible draft shield system for automatic operation at the touch of a key as well as intelligent learning for precise movement in specialized applications. The device seamlessly integrates into existing quality management systems and has a complete software package with built-in application programs. The SQmin function displays and documents the minimum sample quantity for compliance with USP section .
