

Industrial Gas Detector

The Series 3000 XPIS gas detector uses existing two-wire systems to monitor for toxic and oxygen gas hazards in potentially flammable environments. The device's Intrinsic Safety (IS) and Explosion Proof hazardous area approval allows it to be wired alongside other field wiring without IS certification. This removes the need for cable segregation as required by IS certified detectors, making the Series 3000 XPIS both cost-effective and versatile.

Honeywell Analytics, Lincolnshire, IL; 800-538-0363
