Self-Cleaning Filters (1996)

SC automatic self-cleaning filters can be used to remove solid contamination from process fluids and to protect the integrity of high-grade components that depend on low-viscosity, water, or water-based lubricants. Suitable for applications where fluid flow cannot be interrupted and must be maintained at an acceptable cleanliness level, the filters can achieve flow rates up to 33,000 gpm with ANSI flange sizes ranging from 2 to 36 in.
