

## Stackers With Electric Lift

Available with manual or electric drive, these stackers allow workers to lift, transport, and position up to 3,000 pounds at a time. They feature battery-powered electric lift, with lifting heights of up to 80 in. Designed to handle any type of pallet or skid, they are available in two basic configurations. One is the fork-over design, which works with any type of open-bottom pallet or skid. The second is the straddle style, which accommodates any pallet or skid, even those with closed bottoms. Standard fork lengths are 45 in. for fork-over models and 42 in. for straddle units, but forks are available in other lengths. The space between straddle forks is adjustable, as is the space between straddle legs.
