

## **Master Controller for Air Compressors**

The Sigma Air Manager Basic (SAM Basic) has been engineered to optimize compressed air system performance in small to medium installations. This energy-saving master controller provides pressure band control that standard sequencers are unable to offer. It balances service hours, tracks preventive maintenance requirements, and prevents simultaneous motor starts. It can be adapted to almost any system and can manage up to four compressors or vacuum pumps including multiple types and differing brands. SAM Basic also connects to dryers, filters, and drains to monitor their operating or maintenance status.
