

Thermoplastic Rubber Hose

The Flexadux T-7W is a medium-weight black TPR hose that features a bright yellow external polypropylene wear strip, reinforced with a wire steel helix, to provide high visibility and abrasion resistance. Designed for use at -40°F to 275°F, it's resistant to chemicals, extreme moisture, ozone, UV rays, and weathering. Particularly suitable for fume and dust removal, the hose is available in 2 to 24 in. ID sizes in standard 25- and 50-ft. lengths. It boasts better flow than traditional hose, has an easy-to-clean smooth inner surface, and is extremely flexible and compressible with tight bending characteristics. The Flexadux T-7W is priced from \$1.50/ft., depending upon size and quantity. Samples are provided upon request.
