

# Laser Shaft/Coupling Alignment System

Optalign smart is a new-generation laser shaft/coupling alignment system that boasts quick, accurate, and reliable maintenance work on rotating equipment. Its modular concept allows you to design your own shaft alignment system, acquiring the exact features you need and adding more capabilities as job demands grow. Its alphanumeric keyboard with navigation, menu keys, and help text produce an easily understood screen picture of measurement results and thus makes the Optalign smart a user-friendly system.

**Ludeca Inc., Doral, FL; 305-591-8935; [www.ludeca.com](http://www.ludeca.com)**

Editor's Note: Its patented automatic Continuous Sweep measurement mode evaluates hundreds of readings during shaft rotation. This compares to shooting a movie vs. taking flash pictures at certain intervals.
