Spiral Elements (2504)

Spirapro TFC SR3 and TFC reverse osmosis (RO) spiral elements can be used for pharmaceutical and fine chemical applications. They are engineered to lower operating costs significantly for a wide variety of applications including selective rejection, desalting, and organics concentration. They are especially suitable for desalting and separation of antibiotics and APIs. Both TFC SR3 and RO elements can be used to replace Nanomax or Desal membranes. All element components pass USP Class VI toxicity testing guidelines.
