

Extreme Grade Gaskets

Booth 844

Several lines of gaskets to be displayed include the Extreme Grade line, which is available in four styles to fit a variety of applications, promises a 20 percent better seal, and is environmentally friendly since it lowers leakage rates and reduces emissions. For hostile environments, the leak-free, no-dilution Hydra-Just Sealing System can be used to replace mechanical seals in most industrial pumping applications, and it provides fair warning when the seal should be changed. The Multi-Swell self-loading general service gasket, which virtually eliminates insufficient load problems by creating its own load when it comes into contact with oil or water, is twice as soft as conventional gaskets, conforms to irregular flanges, and ensures tight seals with lower loads.
